

A Practical Course in Terminology Processing

Juan C. Sager

Since the advent of the computer, terminology management can be carried out by almost anyone who has learnt to use a computer. Terminology management has proved to be an efficient tool in international communications in industry, education and international organisations. Software packages are readily available and international corporations often have their own terminology database. Following these developments, translators and terminologists are confronted with a specialised form of information management involving compilation and standardisation of vocabulary, storage, retrieval and updating. A Practical Course in Terminology Processing provides the key to methods of terminology management for the English language, for general and specific purposes. This unique course has been developed on the basis of years of teaching experience and research at the University of Manchester Institute of Science and Technology (UMIST, UK) and is particularly suitable for translation courses, freelance translators, technical writers, as well as for non-linguists who are confronted with terminology processing as part of their profession. The 1996 reprint of the paperback edition includes an index.
