Poverty and HIV/AIDS Epidemic

The case of Adama City in Ethiopia

Poverty and HIV/AIDS Epidemic

Balayneh Nekatibeb Begna

There is a huge and- more than twenty years into the epidemic-outrageous gap in what we know about HIV/AIDS. Although combating this serious development challenge have been rated by a panel of top international economists as having the higher priority, the pandemic remains a social, economic and at times political challenge. Since Thabo Mbekis speech at the opening of the 13th International AIDS Conference held in Durban, governments, NGOs and funding agencies have started to consider lack of proper understanding and recognition of the relationship between poverty and HIV/AIDS as a major constraint in prevention and control policies and strategies. This book analyses how demographic and socio-economic determinates of poverty affects spread of HIV/AIDS based on a study conducted in Adama City, Ethiopia. It also indicates alternative and/or complementary strategy for actions of policy makers and practitioners who work to break the cycle of the pandemic.
